Quality Control Team Report
7-18-2019

Group Members:

Aleksey Titov
Steven Ginsberg
Jerfyn Rosario
Kenny Shi
Kibria Mohammed
Vladislav Gladyshev

How is your team breaking down work, how are planning to tackle things in weekly increments, in what order, when do you expect to finish each feature?

We plan on negotiating deadlines with the other teams for testable versions of various features. These features can be sent to us in bulk or one-by-one. By the end of the week that the testable version is given, we would like to give feedback to the groups that have provided us with the feature.

What we are looking to test so far is the following:
- Use Github issue system to post issues we have found, like a ticketing system
- Suggestions to improve code
- General idea of what to test until an implementation is created, then have specific test cases
- Time taken to post
- Authentication process for signing in
- Spam bot check/Multiple post check from same person/ID/IP
- Check if there is a limit to the amount of posts the database can hold
- Make sure users are able to sign up and login without problems
- Search engine accuracy
- Search results may be sorted in order of which have been frequented or most posted.
- Does sort actually sort properly

This list is <u>not final</u>. It will grow as more features are introduced to the website.

Would your team prefer other teams to contact a representative of your team or all team members?

We would prefer other teams contact all members of our team through the GitHub Team site. This will make it more likely for us to reply promptly to any questions the other teams may have.
